

www.euformag.eu

Created in 2010, EUFORMAG is a **European network of forest sector magazines**. At the moment, it gathers 8 magazines from 5 different countries, and hits regularly more than 10 000 forest owners, engineers and forest agents.

EUFORMAG aims to **disseminate some practical** and useful knowledge at a **concrete forest management level**, likely to interest two or more European countries.

In other respects, EUFORMAG is an efficient **tool to make circulate** the results produced by **forest projects of European interest**.

Our shared convictions

- there is a wide range of forest magazines in Europe, and quite a lot of the articles published by those magazines are likely to interest others readers, out of their respective frontiers.
- it's possible to share part of this common publishing resource, and to open a window on Europe, to enrich concretely our readers' knowledge with the practices and actions identified at a European scale
- it's desirable to better appreciate some varied implementations and outputs from different projects, to better identify stakeholders, to facilitate networking, and why not, some common initiatives.

Our choices

- to focus on articles dealing with practical issues concerning forest management (technical or governance aspects), more particularly private forests, and raising a strong transnational interest.

Our modalities of organization

- each magazine provides regularly some articles to the members' pool; translates and publishes yearly some articles from the other partners, with the Euformag logo; each of them following its own usual publishing timetable.
- a simple signed agreement defines the modalities of that collaboration among the network
- an intranet site allows the partners to concretely organize this articles exchange, and provide them a forum to facilitate the process.

EUFORMAG est le réseau européen des revues du secteur forestier, qui accueille pour le moment 8 revues de 5 pays différents, ce nombre étant destiné à être élargi. Ces revues communiquent régulièrement des résultats scientifiques et techniques, des expériences concrètes, des points clés du contexte économique, social et juridique concernant le secteur, à plus de 10 000 propriétaires, ingénieurs et gestionnaires forestiers européens. EUFORMAG a été fondé dans le but de diffuser des connaissances de terrain utiles et pratiques, et pourant intéresser deux, voire plusieurs pays européens. Compte tenu de ces caractéristiques, EUFORMAG est un outil efficace et privilégié pour diffuser les résultats des projets forestiers d'intérêt européen.
