Announcement

For the past 10 years, scientists, technical advisors, teachers and trainers, public and private forest managers, have been gathering within AFORCE network to share and transform their knowledge into operational terms, and reassemble it into useful decision making tools for practitioners, forest advisors and managers.

AFORCE network and its partners invite you to celebrate its 10th anniversary by attending this symposium presenting the latest projects and results and reflecting on its path since its beginning

AFORCE Symposium 2019
Forests and climate change: providing support to the adaptation decision

April 2-3, 2019 in Montpellier (France)
(Montpellier SupAgro, Campus La Gaillarde, 2 place Pierre Viala)

The main target of this symposium is to present the latest results of projects supported by the AFORCE network in order to provide support to the decision making in a context of climate change. Some European initiatives will be presented and discussed in order to share the best practices of adaptation.

The different sessions will open the perspectives for the next program of AFORCE 2020-2025.

The presentations will concern different topics the network has been invested in:

- Selection of tree species and provenances
- Strategies of adaptation, innovations and new management practices
- Risks and economical assessment of the management decisions

The event is open to a various public of foresters: researchers in applied research, forest advisors, extension services, teachers, trainers and policy makers who have to intervene on forest-related issues.

Exchanges during the workshop will be in English and French. A simultaneous translation from French to English and vice versa is planned.
